DATE MAILED: 06/09/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/032,551

Applicant(s)

WERVE ET AL.

Examiner

Steven HD Nguyen

Art Unit

2665

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 April 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-55 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-55 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Objections

1. Claims 25 objected to because of the following informalities:

As claim 19, line 1, "The method as in claim 19" should be changed to – The apparatus as in claim 20 --.

As claims 27-29, line 1, "19" should be changed to – 20 --.

As claim 41, line 1, "The method as in claim" should be changed to – The apparatus as in claim --.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-5, 8-24, 27-42 and 45-55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stovall et al (USP 6192050) in view of Miloslavsky (USP 6021428) and Cave (USP 5958014) and Roberts (USP 6295551).

As claims 1-3, 5, 8-13, 15-22, 24, 27-32, 34-39, 42 and 45-55, Stoval discloses (Fig 1-3 and col. 1, lines 59 to col. 8, lines 15) a method for establishing an audio call path between an Internet user accessing a web site and an agent of the web site comprises the steps of providing the web site with a plurality of audio access icons and a plurality of agents; each audio icon

Art Unit: 2665

disposes on a respective web page (Fig 2-3 discloses a web server which includes plurality of web pages having a plurality of call buttons, each button is disposed with a respective web page; wherein the customer click on the button to establish an internet telephone between the customer and agent at the call center); an ACD which places the IP address of user in a call queue of the associated agent until a next available agent becomes available (Col. 3, lines 64 to col. 4, lines 15); the IP address is forwarded to the agent, wherein the web site decodes the requested message for obtaining IP address wherein the IP address is entered in an entry window and the agent uses the IP address for establishing a voice path between the agent and customer by exchanging the IP addresses (Col. 4, lines 51-65 and col. 5, lines 53-57). However, Stovall fails to fully disclose detecting an activation of an audio access icon of plurality of icons; determining an overall type of question associated with each audio icon from information content of the web page of activated icon; selecting an agent with a best relative ability to answer the determined type of question based upon a skill list for the agents; call center has a plurality of agent groups wherein each of agent group is associated with an audio icon; selecting an agent from a plurality of agents based on the determined of overall type of question associated with the activated audio icon from the information context of the web page of the activated audio icon and from a context of prior interactions between the internet user and the web site and providing the internet user with a message requesting that internet user wait for next available agent. In the same field of endeavor, Miloslavsky discloses (Fig 1-23 and col. 1, lines 24 to col. 39, lines 58) the steps of detecting an activation of an audio access icon of plurality of icons; determining an overall type of question associated with each audio icon from information content of the web page of activated icon; selecting an agent with a best relative ability to answer the determined type of

Art Unit: 2665

question based upon a skill list for the agents; call center has a plurality of agent groups wherein each of agent group is associated with an audio icon (col. 1, lines 42-48, col. 12, lines 5-39 and col. 15, lines 1-28); a customer information which is stored in the database, is retrieved to transmit to the workstation of the selected agent of the agent group (col. 23, lines 61-67); transfer a collected information and identifier agent to a database of the web site and the group of agents and retrieve the user record from database and display this record at the terminal of agent. (See col. 1, lines 32-52, col. 10, lines 45 to col. 15, lines 67; col. 20, lines 37-53; col. 25, lines 5-37; the customer clicks on the icon to speak to an agent, the IP address of the customer and information reviewed web pages will be send to call center for determining to select a quality agent from an agent group which is associated with this product and the information agent and customer which are stored in the database, retrieved to forward to the work station of agent, database 4110 for storing the information above customer and agent). However, Stovall and Miloslavsky fail to disclose a step of selecting an agent from a plurality of agents based on the determined of overall type of question associated with the activated audio icon from the information context of the web page of the activated audio icon and from a context of prior interactions between the internet user and the web site and providing the internet user with a message requesting that internet user wait for next available agent. In the same field of endeavor, Cave discloses a method of selecting a suitable agent from a pool of agent based upon the context of the activated web page audio icon and a history of the requests in order to establish internet telephony between the internet user and the selected agent and providing a message to ask the internet user to wait for an next available agent via telephone network (See col. 3, lines 35 to col. 4, lines 24 and Fig 7, col. 5, lines 18-27). However, Stovall, Cave and Miloslavsky fail

Art Unit: 2665

to disclose providing the Internet user with a message requesting that Internet user wait for next available agent. In the same field of endeavor, Roberts discloses providing the Internet user with a message requesting that internet user wait for next available agent via Internet (Fig 7, Ref 238-240 and col. 21, lines 17-60; the server collects the entered data by the internet user and analyzing the collected data for determining which skills agent of a group agent will be selected and place the call in its queue and providing a waiting to the internet user).

Since, Cave suggests the user of a mouse to contact a suitable agent based on the history of the request from the server and Miloslavsky suggests that the telephone number can be replaced with the Internet address of the customer when the customer submits the information to the call center for establishing a voice call between the customer and agent. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to apply teaching of Roberts such as providing waiting message to the internet user; Cave such as selecting a suitable agent from a pool of agent based upon the context of the activated web page audio icon and a history of request in order to establish internet telephony between the internet user and the selected agent and Miloslavsky such as determining a history requested of customer to select a skill agent into Stoval's communication system. The motivation would have been to avoid a long distance charge when the customer requests some information about the transaction.

As claims 4 and 23, it is a designer choice for correlating a training level of an agent of the plurality of agents with an information content of an audio-access icon of the at least some web pages.

As claims 14 and 33, Stoval, Roberts, Cave and Miloslavsky fail to disclose the claimed invention. However, the examiner takes an official notices that a method of create an entry

Art Unit: 2665

information web page such as credit card to allow the customer to enter data is well known and expected in the art. Therefore, it would have been obvious to one of ordinary skill in the art to create a field to allow customer to enter credit card number into Stoval, Cave and Miloslavsky because Miloslavsky suggests the credit card number can submit during a voice conversation between the customer and agent.

As claims 40-41, Stoval, Roberts, Cave and Miloslavsky fail to disclose the claimed invention. However, it would have been explicit to one of ordinary skill in the art to apply a look up table in a memory of the web site controller which relates to the information content of each web page of the at least some web pages with an audio access icon disposed on the web page and a call distribution look up table which correlates to the level of an agent group of the plurality of agent groups with information content of an audio access icon of the at least some web pages in order to display the correct information web page and establish a correct call path when the user click on the web page because it is well known and expected in the art.

4. Claims 6-7, 25-26 and 43-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stoval, Roberts, Cave and Miloslavsky as applied to claim 1, 20 and 37 above, and further in view of Gerber (USP 5657383).

As claims 6-7, 25-26 and 43-44, Stoval, Roberts, Cave and Miloslavsky disclose an ACD. However, they fail to disclose the claimed invention. In the same field of endeavor, Gerber discloses a step of measuring a time period that the user has been in the call queue and comparing the measured time with a threshold value and overflowing the user to a queue of another agent group when the measured time exceeds the threshold (Fig 6A-6C discloses a call

Art Unit: 2665

which places in the queue of team A for period of time and using this time to comparing with a threshold in order to move the user to another team such as Team B).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to apply the method for identifying the waiting period of a user and comparing it with a threshold in order to transfer the user to another group of an agent as taught by Gerber et al into the communication system of Stoval, Roberts, Cave and Miloslavsky. The suggestion/motivation would have been to avoid an overflow of a queue of a level of a group of agents.

Response to Arguments

5. Applicant's arguments filed 4/5/2004 have been fully considered but they are not persuasive.

In response page 3, the applicant states that the references fail to teach a method and system for providing the Internet user with a message requesting that the Internet user wait for the next available agent. In reply, Cave discloses a QAM 11 of server 103 will generate a message to request an Internet user 10 to hold for a next available agent after detecting a request for speak to agent (See col. 4, lines 14-24 and col. 5, lines 18-27). Roberts discloses a method and system for providing a message such when his call request will be answered by agent (See col. 5, lines 32-37 and col. 21, lines 25-67).

Art Unit: 2665

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven HD Nguyen whose telephone number is (703) 308-8848. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy D Vu can be reached on (703) 308-6602. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
